General Procedure

The general procedure for toy adaptation is as follows:

1. Take the toy apart.
2. Solder an audio jack in parallel.
3. Test the toy.
4. Repackage the toy (if you will donate it).

Safety Precautions

This adaptation requires the use of a soldering iron and drill.

When drilling or soldering, adhere to the following safety guidelines:

- Be alert and aware of your surroundings.
- Wear safety goggles.
- Tie back long hair and secure loose-fitting clothing.
- Take all batteries out of the toy.

When soldering, adhere to the following safety guidelines:

- Ensure that you are in a well-ventilated room.
- Ensure soldering iron cords will not be tripped over.
- Keep your hands away from the iron tip, soldering connection, or anything that has recently touched the tip.
